SATHYABAMA
INSTITUTE OF SCIENCE AND TECHNOLOGY
(DEEMED TO BE UNIVERSITY)

CONTINUOUS ASSESSMENT EXAM-I (SET B)

Programme: B.E. ECE, ECE DS, EEE, Civil, Aero, Mech, Mechatron, B.Tech. BTE, BME, Chem **Max. Marks: 50**
Course Code: SHSB1101 **Time: 2 Hours**
Course Name: Technical English **Sem: II**
Batch : 2025-2029 **Date: 16.01.2026**

Part-A Answer ALL the questions (7 × 2=14)

Q.No	Questions	CO
1.	Transform the given sentence into the directed sentence a. He is a successful entrepreneur. (Change it into a interrogative sentence) b. Could you email those files as soon as possible? (Change it into an imperative sentence)	1
2.	Use an appropriate affix to complete the sentence. a. Advances in biotechnology have made organ _____ (transplant) increasingly successful worldwide. b. The committee expressed concern over the _____ (ethical) practices adopted in the clinical trials.	1
3.	Apply a suitable tense to complete the sentence. By the time the ethics committee finally reviewed the proposal, the researchers _____ (submit) multiple revisions, and the original deadline _____ (pass) several weeks earlier.	1
4.	Convert the active voice into impersonal passive voice. a. The organization launched the global initiative to promote digital literacy in rural areas. b. Experts argue that social media influences political awareness among young adults.	1
5.	Fill in the blanks with an appropriate verb that agrees with the subject. a. None of the information provided _____ (have/has) proven reliable during the investigation. b. Politics, though often controversial, _____ (remain/remains) an essential subject in social sciences.	2
6.	Complete the sentence using suitable discourse markers. a. The software is user-friendly and highly efficient; _____, it integrates seamlessly with third-party applications, enhancing workflow. b. _____ the high cost of implementing AI-based systems, many companies are adopting them to improve efficiency.	2
7.	Transform the sentence as directed. a. The students submitted their projects on time. The instructor returned them for revisions. (Combine these sentences into a compound sentence.) b. Since the engineers optimise the network protocols, the system will handle more data efficiently. (Change it into a compound sentence)	2

Part-B Answer ALL the questions (3 × 12 = 36)

8.	Apply for the below given position with a cover letter and a professional resume for a fresher applying for the above position. Highlight educational qualifications, internships, technical skills, projects, and achievements relevant to the domain. **Position:** Senior Research Scientist – Biotech Division **Company:** GenNext Biologics Ltd. **Location:** Hyderabad **Experience Required:** 5–7 years in molecular biology, genetic engineering, or biopharmaceutical research	1
	(OR)	
9.	Write a letter to the editor of the Hindu Newspaper to publish your letter highlighting the need to manage electronic waste (e-waste) responsibly.	1
10.	**Reading Comprehension** Rapid urbanization has significantly increased the impervious surface area in metropolitan regions, leading to heightened storm water runoff, flooding, and water pollution. Traditional drainage infrastructure often fails to accommodate the increasing volume of runoff, resulting in urban flooding and degradation of aquatic ecosystems. To address these challenges, civil engineers have increasingly adopted Sustainable Urban Drainage Systems (SUDS), which aim to mimic natural hydrological processes. SUDS integrate techniques such as permeable pavements, bio-	1

retention swales, green roofs, and constructed wetlands to enhance infiltration, slow runoff, and improve water quality. For instance, permeable pavements allow storm water to percolate through the surface into underlying soil layers, reducing surface flooding and replenishing groundwater. Green roofs, on the other hand, absorb rainfall and provide insulation, while constructed wetlands naturally filter pollutants from urban runoff.

Implementation of SUDS requires careful hydrological modeling, site-specific planning, and inter-disciplinary collaboration between civil engineers, urban planners, and environmental scientists. Despite higher initial costs compared to conventional drainage systems, long-term benefits include reduced flood risk, improved public health, and enhanced urban aesthetics. Governments in many countries are now integrating SUDS into urban development policies to promote resilient and sustainable cities capable of adapting to climate change and population growth.

Answer all the given questions

1. Define Sustainable Urban Drainage Systems (SUDS) as explained in the passage.
2. Identify three negative consequences of rapid urbanization on storm water management mentioned in the passage.
3. Explain the role of permeable pavements in mitigating urban flooding.
4. How do green roofs and constructed wetlands contribute to improving water quality?
5. Why does the passage emphasize the importance of inter-disciplinary collaboration in implementing SUDS?
6. Discuss two long-term benefits of SUDS over conventional drainage systems as highlighted in the passage.

(OR)

11.	Write a formal email to the manager of a shopping mall about poor maintenance of parking lots and requesting immediate improvements.	2

12.	Write a paragraph of 350 words by comparing and contrasting teamwork and individual work.	2

(OR)

13.	Interpret the following diagram by describing the process of petroleum Extraction Technology for Energy Production. Use suitable discourse markers to construct the paragraph. 	2
