	(OR)	
9.	Write a letter to the editor of the Hindu Newspaper to publish your letter highlighting the need to preserve non-renewable resources.	1
10.	**Comprehend the following Passage and Answer the questions given below.** In today's world, many people are very worried about the environment, and make an effort to make "green" choices. Most of the world's big companies now try to demonstrate that they are eco-friendly, and use recyclable packaging and green marketing slogans to show this. However, beneath the surface there is a worrying trend, where companies pretend to be greener than they actually are. This is called greenwashing, and it's very important for consumers, particularly young adults, to be aware of the practice. By learning to recognise greenwashing, you can become a better consumer and encourage companies and governments to be more honest in their approach. Greenwashing happens when people promote their products or policies as environmentally friendly, while this is not the case. The word became popular in the 1980s when people first	1

began to understand that the world's environment was under threat. Companies and governments began to showcase their so-called "eco-friendly" practices and policies, often exaggerating or making false claims to attract customers, improve their image, and increase their profits.

Greenwashing is not just about tricking consumers; it has much more serious consequences. In most situations, it is more expensive to make products using sustainable methods and materials, than to do so without bothering about sustainability. So when companies make false claims about their environmental actions, they hurt real efforts towards sustainability and lessen the advantages of genuine green initiatives. This can confuse buyers and also take business away from companies that genuinely care about protecting the environment. For young adults, who increasingly focus on sustainability when they shop, recognizing greenwashing is vital.

Answer the following Questions

a. What is the practice of "greenwashing" and why is it concerning for consumers?

b. How did the term "greenwashing" become popular, and what triggered its rise?

c. Why is it more expensive to make products using sustainable methods and materials compared to conventional methods?

d. What are the potential consequences of greenwashing for genuine sustainability efforts?

e. Why is it particularly important for young adults to recognize greenwashing in today's market?

f. What are some ways consumers can identify whether a company's eco-friendly claims are legitimate or misleading?

(OR)
